

# Daifuku Environmental Vision 2050

# Realizing a world where material handling systems have zero environmental impact.

## Addressing Climate Change

**Goal**

Cutting net CO<sub>2</sub> emissions to **zero** in the supply chain

## Crucial issue areas for the Daifuku Group

## Promoting Resource Recycling

**Goal**

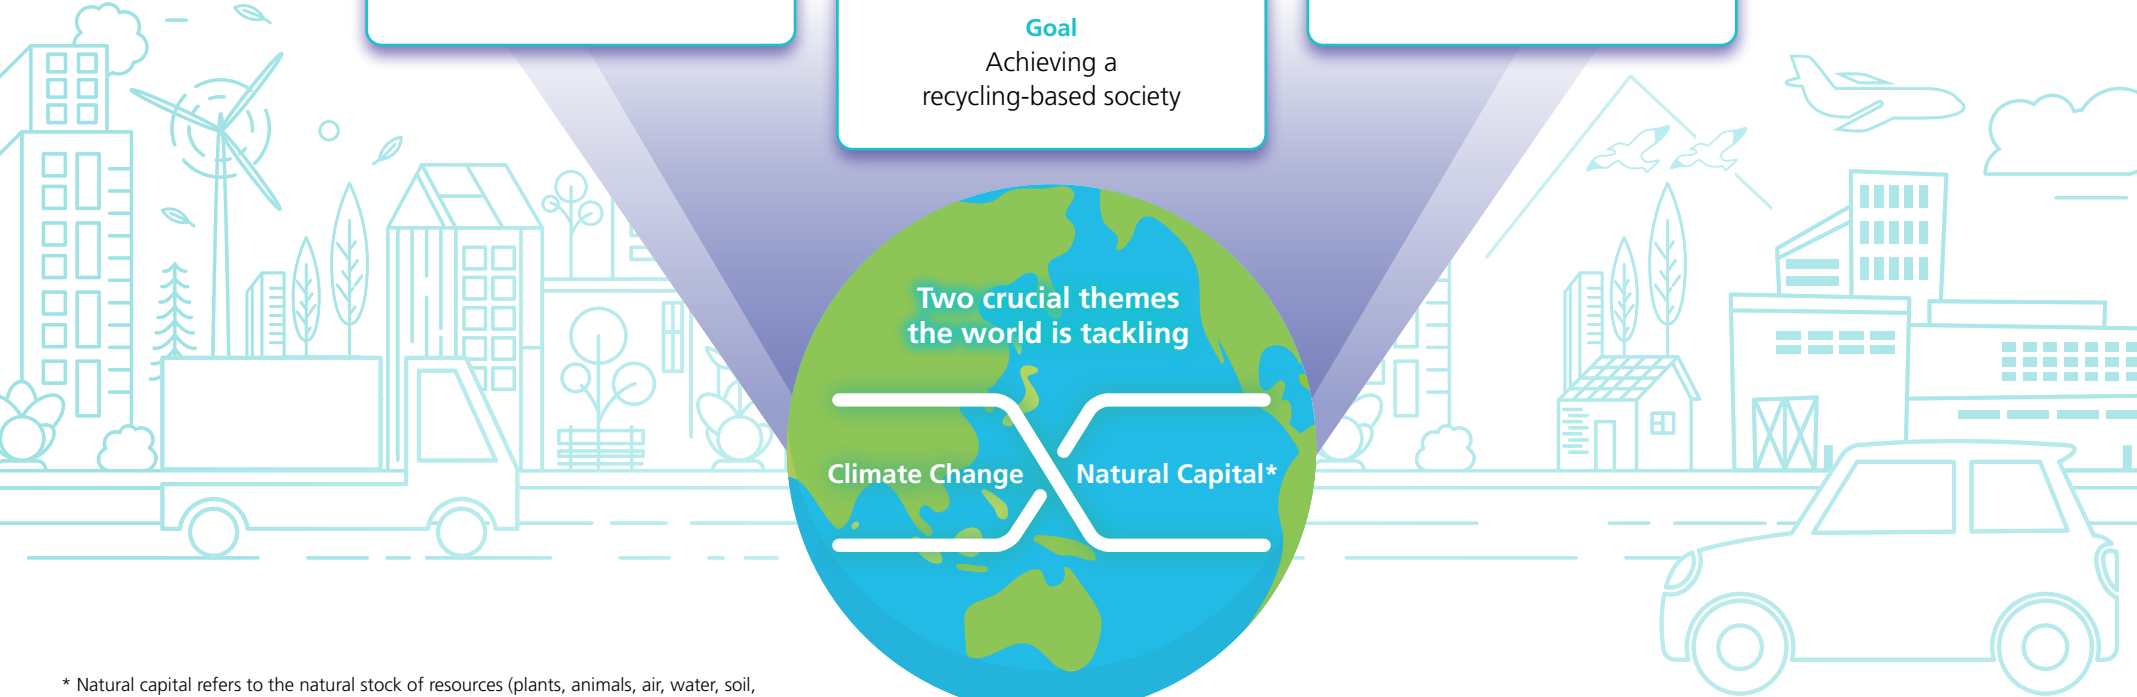

Achieving a recycling-based society

## Coexisting with Nature

**Goal**

**Zero** negative impact on natural capital

\* Natural capital refers to the natural stock of resources (plants, animals, air, water, soil, minerals, etc.) that combine to yield benefits to people. Businesses and society are expected to use this capital in a sustainable manner. Although these resources are being eroded by climate change, improving their sustainability will lead to the absorption of greenhouse gases and the mitigation of natural disasters.

Ensuring a healthy global environment is an essential prerequisite to creating a world where all people can lead fulfilling lives. Thus, under our management philosophy "Automation that Inspires," addressing climate change and other environmental challenges is a crucial management issue. The Daifuku Group will fulfill its responsibilities as a corporate partner throughout the entire supply chain, and we will strive to realize this Vision by focusing on the future society we wish to create.

### Three Crucial Issue Areas

**Addressing Climate Change**

**Goal**  
Cutting net CO<sub>2</sub> emissions to **zero** in the supply chain

We will reduce net CO<sub>2</sub> emissions from our business operations throughout our supply chain to zero by developing and providing products and services that contribute to the creation of a decarbonized society, using energy efficiently and introducing renewable energy at our Group sites and suppliers.

**Promoting Resource Recycling**

**Goal**  
Achieving a recycling-based society

We will endeavor to reduce the amount of water and other resources we use. We will also contribute to the formation of a recycling-based society by extending the service life of our products, minimizing the amount of waste generated at our production sites, and expanding the recycling of used products and parts.

**Coexisting with Nature**

**Goal**  
**Zero** negative impact on natural capital

We will strive to sustainably use ecosystem services and conserve biodiversity based on an understanding of the impact of our business activities on the global environment. We will minimize negative impacts on natural capital such as air, water, and soil, and, together with our stakeholders, coexist in harmony with nature.
