

LUBRIPIN™

Moves oil where it needs to be...Fast

FEATURES

- Concave & Notched Ends
- Speeds Oil to Bearing Surfaces
- Reduces Wear and Chain Stretch
- High-strength MicroAlloy Steel
- In Stock, Ready to Ship

LUBRIPIN

Advantages

Gets lubrication to where it needs to be... Fast

For most companies in the finishing industry, the chain conveyor is the backbone of their business. Proper lubrication significantly extends the life of a chain conveyor system, which is why we developed LubriPin. The new design features concave edges with notches. This enables the oil to flow quickly down the pin – reaching the high-wear bearing surfaces fast. LubriPin increases chain longevity, reduces chain stretch, and results in a quieter operation for customers.

We first developed our rivetless chain conveyor nearly 100 years ago, revolutionizing mass production. We continue to bring new innovation to the market with LubriPin – one of the most significant changes to chain conveyors in the past decade.

Benefits include:

- Improved lubrication
- Increases longevity
- Quieter operation
- Less friction, causing less wear
- Reduces chain stretch and break-in time

Durability and reliability are what separates our chain conveyor from all the rest. Our rivetless conveyor chain pins are precision forged and finished to provide the smoothest chain pin bearing surface in the industry.

Daifuku
LubriPin

Competitor's
Chain Pin

Simple Design

Three components make up the conveyor chain, the center link, side link and connecting pin – LubriPin.

Easy Assembly

No tools are necessary. The chain can be assembled or disassembled by hand. The same design prevents the chain links from separating during operation.
